the appeal to our obligations to future generations is one of the most forceful emotional and effective arguments available to politicians and citizens and is the cornerstone of all modern policies aimed at sustainable development yet the exact nature and extent of these obligations are unclear who owes what to whom exactly and why this highly accessible book provides an extensive and comprehensive overview of current research and theory about why and how we should protect future generations it exposes how and why the interests of people today and those of future generations are often in conflict and what can be done it rebuts critical concepts such as parfits non identity paradox and beckerman s denial of any possibility of intergenerational justice the core of the book is the lucid application of a veil of ignorance to derive principles of intergenerational justice which show that our duties to posterity are stronger than is often supposed tremmel s approach demands that each generation both consider and improve the well being of future generations to measure the well being of future generations tremmel employs the human development index rather than the metrics of utilitarian subjective happiness the book thus answers in detailed concrete terms the two most important questions of every theory of intergenerational justice what to sustain and how much to sustain ultimately this book provides a theory of intergenerational justice that is both intellectually robust and practical with wide applicability to law policy economics climate change and all other contexts that affect future generations

contemporary life is defined by excess there must always be more there is never enough we need a

surplus to what we need to be able to truly enjoy what we have slavoj žižek's guide to surplus and why it's enjoyable begins by arguing that what is surplus to our needs is by its very nature unsubstantial and unnecessary but perversely without this surplus we wouldn't be able to enjoy what is substantial and necessary indeed without the surplus we wouldn't be able to identify what was the perfect amount is there any escape from the vicious cycle of surplus enjoyment or are we forever doomed to simply want more engaging with everything from the joker film to pop songs and thomas aquinas to the history of pandemics žižek argues that recognising the society of enjoyment we live in for what it is can provide an explanation for the political impasses in which we find ourselves today and if we begin even a little bit to recognise that the nuggets of enjoyment we find in excess are as flimsy and futile might we find a way out

a panoramic view of the cosmos must begin with the tension of a single political moment in quantum history slavoj žižek brings together hegelian dialectics lacan psychoanalysis and quantum mechanics to rethink history reality and political possibility taking up lenin's challenge to radically reconsider materialism in the wake of each big scientific discovery and rejecting the recent vogue for giving a vague spiritualist spin to wave mechanics žižek embraces the philosophical implications of quantum mechanics with characteristic erudition and verve drawing on the central themes of the holographic universe non commutativity and the collapse of superpositions žižek evolves a quantum inspired ontology which reinvents the historical materialism of hegel and heidegger and compels a brutal often darkly funny inquisition into the chances of radical emancipatory acts today quantum history takes the reader from the absolute contradiction of the primordial void through quantum oscillations to our ordinary reality weaving in lacan and deleuze roveti and schelling opera cinema sex and war žižek is at his sharpest saddest most provocative best as he demonstrates that there is no way of extracting ourselves from the texture of history no neutral position from which the workings of the world can be observed transparently we must act from a contingent complex and inscrutable political moment in sadness and in doubt but defiantly
